ABSTRACT

Volume 3, the third of eight publications developed by the Intercultural Development Research Association as part of the "Texas School Dropout Survey Project," describes a tracking study developed to measure the magnitude of the dropout problem in Texas. The tracking of 1,500 students who had withdrawn from schools in 10 districts is explained. A survey designed to elicit information from these students on their dropout status, reasons for withdrawal, working status, unmet personal and academic needs, future goals, degree of acculturation, and parents' influence on their decision to leave or return to school is described. These survey results, from 318 former students who were successfully contacted and who agreed to participate, are presented: (1) 14% of students contacted by telephone and 22% contacted by mail had not dropped out, but had either transferred or had never left school; (2) the majority of the confirmed dropouts left school because of failing grades, absenteeism, marriage, or financial difficulties at home; (3) most of the dropouts were unemployed, while those with jobs were working primarily at labor intensive, minimum wage jobs; (4) almost 40% were planning to return to school and 12% had already returned. Both the English and the Spanish versions of the tracking interview, the mail survey, the superintendent's letter, and 357 data tables are included. (NB)

Preface

This volume is one of eight publications developed by the Intercultural Development Research Association as part of the Texas School Dropout Survey Project. Seven volumes contain comprehensive reports for each area of study:

Volume 1: Magnitude of the Problem -- Census Analysis

Volume 2: Magnitude of the Problem -- Attrition Analysis

Volume 3: Magnitude of the Problem -- Tracking Study

Volume 4: Magnitude of the Problem -- School District Research and Procedure

Volume 5: Benefit-Cost Impact of the Dropout Problem

Volume 6: Program Responses -- Their Nature and Effectiveness

Volume 7: Study Methods and Procedures

Additionally, a synopsis of findings and implications across all areas of study is included in the report entitled Texas School Dropout Survey Project: A Summary of Findings.

VOLUME 4: MAGNITUDE OF THE PROBLEM -- TRACKING STUDY

One further index for measuring the magnitude of the dropout problem in the State of Texas is the tracking of students who have withdrawn. At a local level, a few school districts in Texas have conducted tracking studies with different results.

The Austin Independent School District (AISD) conducted a very effective tracking effort. In 1984, the district tracked a group of students from 1978-1979 to 1982-1983. By assigning each student a school-leaver code and updating the list for reentries the AISD tracked 5,039 students. They found that 48 percent had graduated, 15 percent had transferred, 10 percent had enrolled for a fifth year, 19 percent had dropped out, and 8 percent were classified as "other leavers." Reasons for dropping out were not addressed.

In 1986, the Corpus Christi Independent School District took a random sample of 300 presumed dropouts and was able to contact and interview 117 (39 percent) by phone. Personal or family problems were cited as the main reasons for dropping out.

The Houston Independent School District attempted to track 5,000 dropouts in 1986 and was able to interview 336 (6.7 percent) by phone. Of the 293 interviews which were usable for analysis, 97 (33 percent) were enrolled in school at the time. They found "just dropped out" was the main reason for dropping out.

From a total of 1,186 eighth-grade dropouts, the Ysleta Independent School District selected a random sample of 300 and contacted 47 percent by phone. Their 1985 study found 20 percent

were still in junior high school while 13 percent were enrolled outside of Ysleta ISD. Only 42 out of 300 (14 percent) had dropped out of school. The main factors cited for dropping out were marriage, pregnancy, poor grades, jobs, conflicts with teachers, and an incompatibility with the school system.

For purposes of the Intercultural Development Research Association's (IDRA) statewide survey, a sample of 10 districts was selected for the tracking of 1500 students who had withdrawn. Sample selection was based on several factors:

1. Texas Education Agency recommendation;
2. Districts had a formal means of identifying their withdrawn students; and
3. Districts were willing to participate.

District size, geographic location, ethnic concentration, and special population distribution were also taken into account in an effort to maximize district representativeness.

The 10 districts chosen were the following:

1. Austin
2. Brownsville
3. Corpus Christi
4. Dumas
5. Edgewood
6. Fort Stockton
7. Fort Worth
8. Lubbock
9. Pittsburg
10. Tyler

Each of the ten districts supplied their most recent withdrawal lists with the names, addresses, phone numbers, dates

of birth, and reasons for withdrawal (when available). A random sample of 150 presumed dropouts was selected from the larger districts with alternate lists being used when needed (no available phone number, for example). The entire population was tapped for the districts whose dropout populations were less than 150 (Dumas, Pittsburg).

An in-depth telephone tracking survey was developed and implemented in both English and Spanish versions (See Attachments 1,2). The Spanish version was derived through a process of translation and back-translation. Students with a Hispanic surname were asked before the interview which version they preferred. Only 10 students (3.2%) preferred using the Spanish version.

The purpose of the survey was to elicit information from the presumed withdrawn students on their dropout status, reason(s) for withdrawal, and working status. In addition, questions were asked regarding unmet personal and academic needs, future goals, degree of acculturation and parents' influence on their decision to leave or return to school.

A team of surveyors was rigorously trained to follow specific interview protocols and instructions, thus establishing quality controls and minimizing interviewer bias (See Volume 8: Study Methods and Procedures). A special emphasis was placed on assuring the respondents of confidentiality and anonymity.

The survey was pilot tested on 23 presumed dropouts, randomly selected from a Dallas Independent School District sample. Only the English version for the pilot test was needed. A contact rate of 13 percent (n=3) was achieved. The "no contacts" were the

result of busy phone lines (n=1), no answers (n=3), disconnected phones (n=3), or unavailability of screenees (n=6).

After a few minor modifications, the survey was implemented in the ten aforementioned districts.

Three telephone contact attempts resulted in a 21 percent contact rate (n=318). Contact attempts by each district are summarized in Table 1. After three telephone contact attempts failed, two contact attempts by a mail survey were made. A modified one-page mail survey was sent in an effort to obtain information on students' dropout and work status, as well as their reason(s) for leaving school (See Attachment 3). The mail survey contact rate was 10.8 percent (n=142).

Most of the telephone "no contacts" (n=1211) were the result of disconnected phones, wrong phone numbers, screenees being out of town, or unavailable at the time of the call. Table 2 presents the reasons for "no contacts" by district with Edgewood ISD having the highest contact rate (38.5 percent) and Austin ISD, the lowest (15.4 percent). Many of the "no contacts" for the mail survey were the result of outdated addresses (32.9 percent), while the other "no contacts" remain unaccounted.

Most students, once contacted, were willing to participate. Less than one percent were interrupted by their parents during the interview and not allowed to continue the interview. Those parents usually expressed a concern over the district's dissemination of their children's archival data. As a result, a letter was sent to the districts informing them of these rare occurrences and possible future contacts from parents (See

Attachment 4). No further action was undertaken by the parents to our knowledge.

Both the telephone and mail surveys yielded similar results. Fourteen percent of the students contacted by telephone and 22 percent of the mail survey respondents had not dropped out, but either transfered or had never left school. The majority of the confirmed dropouts left school because of failing grades, House Bill 72 absentee rule, marriage, or financial difficulties at home. These reasons for leaving school are consistent with those cited in other studies (Peng, 1982).

Having left school, most of the phone and mail survey respondents were unemployed (49.8 percent and 61 percent, respectively). Those who did have jobs were mostly working at labor intensive, minimum wage jobs, ranging from fruit/vegetable pickers to waitresses to repairmen. A few were employed as store managers, nurse' aides, and electricians. One dropout was working for the Department of Agriculture as an entomologist.

Of those employed, most work an average of 40 hours a week, with some working as few as 8 or as many as 70 hours a week. Salaries ranged from $.85 an hour to $11.00 an hour, with the majority of students earning minimum wage ($3.35 an hour). Table 3 summarizes the major telephone tracking survey results for all districts.

One percent had received their GED but almost 40 percent were planning to return to school. Twelve percent had already returned to school.

When asked what they would have liked to have changed about school, most answered House Bill 72 and its absentee and grading

ramifications. The majority of respondents were content with other factors such as teachers (53.7 percent), adults in the school (57.8 percent), pupils (60.3 percent), and the school rules (42.9 percent).

Students were evenly split on whether or not they talked to anyone about leaving school (No = 39.4 percent versus Yes = 36.5 percent). This despite the fact that most admitted there were people both in and out of school who cared how they were doing, and named counselors, teachers, friends, and parents as those most concerned. Most who didn't discuss it with anyone chose not to because they felt it was a personal decision. Those who did discuss it were advised to stay in school but chose to leave for the reasons cited above.

When asked if their parents had completed high school, 44 epercent of the mothers and 40 percent of the fathers had not, compared to a high school completion rate of 31 percent for both the mothers and fathers.

Most of the parents were native-born; 61 percent of the mothers and 57 percent of the fathers were born in the United States. Only 15 percent of the mothers and 14 percent of the fathers were foreign-born.

Hispanics only were asked a series of language questions as a measure of acculturation. This acculturation scale has been used and validated in a series of studies conducted among the Mexican American population (Deyo 1982).

Most of the students reported Spanish as the first language learned as a child, and as the language usually spoken at home.

However, most cited English as the preferred language. When asked if they read any English, 36.2 percent said they did, while 1.9 percent said they did not.

Most students reported getting along with their parents (80.5 percent) and friends (74.2 percent). Interestingly, 44 percent of them reported their friends had also left school.

Twenty-six percent of the respondents reported there had been family problems, such as arguments with their parents or financial problems, which had influenced their decision to leave school.

When asked what they saw themselves doing 5 years from now, almost all of the respondents cited better jobs or going on to college. These telephone tracking survey results for all districts can be found in Tables 4-27. Survey results for each of the ten districts are summarized in Tables 52-291. There were no substantial differences in responses among individual districts.

There were also no marked differences in the answers between male and female telephone survey respondents, except in the area of employment; 36 percent of the males were employed compared to 17 percent of the females. In addition, 51 percent of the males reported that their friends had also left school, compared to 38 percent of the females. Survey results for all districts by sex are summarized in Tables 28-51. Differences by sex for each of the ten districts are not presented due to the similarity in responses.

There were also few differences between male and female responses to the mail survey. Thirty-six percent of the males were currently employed while only 20 percent of the females had

jobs. The mail tracking survey resluts for all districts by sex can be found in Tables 295-297. Tables 328-357 present the mail tracking survey results for each of the ten districts by sex.

Although the tracking of presumed dropouts is both labor intensive and costly, it is an effective means of examining a district's dropout identification procedures. In addition to examining district procedures, students who have withdrawn offer a wealth of information concerning the reasons for their withdrawal, their present status, and their future goals. Such information is invaluable if districts are to identify the problem areas within the system and to implement intervention strategies to reduce the dropout rate.

Tracking efforts can best be implemented if one person, designated within a district, is responsible for identifying and following dropouts. Using standardized tracking procedures, including interdistrict and intradistrict communication, district personnel can effectively track dropouts. Considering that the telephone and mail tracking surveys yielded a combined contact rate of 18 percent despite the limitations of time, of contacting students from ten different districts with varying amounts of demographic data, and of contacting them during the summer, individual districts should fare considerably better in their efforts.

TABLE 1

RESULTS OF CONTACT ATTEMPTS BY DISTRICT: TELEPHONE TRACKING STUDY

District	Contact		No Contact		Total	
	n	%	n	%	n	%
Austin	32	15.4	176	84.6	208	100.0

Introduction: Hello, I'm (full name), calling from San Antonio. Am I speaking with (screenee's name)? I'm with IDRA, a research group, and we need your help.
We're doing a study on students who left school. I'd like to ask you a few questions. This should only take about 10 or 15 minutes, and what you tell us will be very important. Will you answer a few questions?
*If yes, continue: It's important that you understand that everything that you tell me will be confidential. Your name will never be used in any of our reports. Ready?
*For Hispanics Only: Would you like the questions in Spanish or English? (If Spanish preferred, use Spanish Interview Schedule)

*If not willing to participate ask, "May I call you back at a better time?" - if no, "thank you very much for your time;"
*if yes, mark appropriate code and return call at time specified if within screening period.

*If willing to answer a few questions, continue with the following questions:

© Intercultural Development Research Association, 1986

7. When were you born?_____ *(confirm above date of birth)
(mo/day/yr)

8. Did you leave (insert campus name) school without graduating?
Yes___ When did you leave school?_____ *GO TO Q10
(mo/yr)

No___ *GO TO Q9

Introducíon: Hello, soy (**full name**), llamando de San Antonio. ¿Estoy hablando con (**screenee's name**)? Trabajo con IDRA, un grupo que hace investigaciones en educacíon, y necesitamos tu ayuda.

Estamos haciendo un estudio acerca de estudiantes que dejaron la escuela. Quisiera hacerte algunas preguntas. Ésto debería tomar como 10 o 15 minutos, y lo que nos digas será muy importante. ¿Podrías contestarme algunas preguntas?

***If yes, continue:** Es importante que comprendas que todo lo que me digas será confidencial. Tu nombre jamás se usará en ninguno de nuestros reportes. ¿Listo(a)?

***If not willing to participate ask:** ¿Te puedo llamar cuando sea más conveniente? - **if no**, "muchas gracias por tu tiempo."

***If yes, mark appropriate code and return call at time specified if within screening period.**

***If willing to answer a few questions, continue with the following questions:**

INTERCULTURAL DEVELOPMENT RESEARCH ASSOCIATION

DR. JOSE A. CARDENAS, Director

The Intercultural Development Research Association is conducting a study on students who left school without graduating and we need to ask you a few important questions.

Everything you tell us will be CONFIDENTIAL - your name will never be used in any of our reports.

Please answer the following questions and return the survey in the stamped, self-addressed envelope immediately. Thank you for your help.

SURVEY QUESTIONS

(Please print clearly)

1. When were you born? _____ (Month) _____ (Day) _____ (Year)

2. Did you leave school without graduating?

   No _____

   Yes ____ School Name _____ Date you left school _____ (MO/YR)

3. Are you in school now? No _____

   Yes ____ School Name _____

   Date you returned to school? _____ (Month) _____ (Year)

4. Why did you leave school? _____

   _____

5. Are you working now? No _____

   Yes ____ Where? _____

6. What do you do at work? _____

7. How many hours a week do you work? _____

8. How much do you earn an hour? _____

PLEASE RETURN IN STAMPED, SELF-ADDRESSED ENVELOPE. THANK YOU.

Attachment 4

July 31, 1986

Dear (Superintendent),

Thank you for providing us with the withdrawal lists for the tracking survey of the Texas Dropout Study Project. The telephone and mail surveys are providing much valuable information on the status of withdrawn students.

One ramification of the contact attempts has been a few concerned parents asking for the source of their child's name and requesting that it be stricken from the contact and/or withdrawal list.

On these rare occurrences, we have informed the parents that the names were supplied by the school districts on the approval of the Texas Education Agency and assured them that the names were being used for research purposes only; that their child's cooperation was on a voluntary basis, and that all information was strictly confidential - names would never be used in any reports.

We have documented these concerns and wish to notify you of their existence should you be contacted by the parents directly. It has been our experience that the parents are satisfied once the research purpose and confidentiality are conveyed.

We greatly appreciate your time and assistance and will keep you notified of our progress. Please feel free to give us a call should you have any questions.

Sincerely,
